## Proven Technology

The LCX603 is Graphtec's all-in-one, industrial label printer and finishing solution that includes multiple spot color printing, auto laminating, contour-cut, auto weeding and a sheet cross-cut function.

The LCX603 Label Finishing System) can be used at printing companies, design firms and also at production and engineering companies manufacturing equipment and components requiring on site labeling. Perfect for low-cost, on-demand, short run labels, specialty labels of any shape, and helps reduce inventory too.

The COPY function in the LCX603, enables higher productivity. Once a job is transferred to the LCX603 from the PC, multiple copies can be made without the PC.

Contour cutting is performed automatically after the label is laminated. The cutting tool allows a contour of any shape. This eliminates the need for cutting dies, resulting in low cost labels as well as reduced inventory!

← The contour is properly aligned to the printed image using the registration mark with the registration mark sensing system (RMS). Three (3) registration marks are created and printed automatically by the LCX603.
