

Ideal Air Purification Systems

Five New Models With AEON Blue® Technology

High-efficiency, multi-level filters remove 99.97% of impurities

DEPLOYING THE IDEAS OF NATURE

Studies show that in locations where air contains high accumulation of negative ions, the oxygen content of the blood increases. All without creating any ozone. This simple and natural principle provides for a variety of positive and tangible effects.

Our new air purification product line filters fine dust, pollen and other allergens, viruses, bacteria, mold spores, pet dander, cigarette smoke and even chemical fumes and odors out of any office or indoor environment. They are especially effective for allergy sufferers. In addition, these models enrich the air with negative ions.

Features:

- **PlasmaWave™** selectable ionizer for active air cleaning - with no harmful ozone emissions. Provides both vitalization and cleaning functions.
- **OptiFlow** captures even remote dust or smoke particles and distributes fresh air optimally through the room.
- **Pre-filter** filters larger particles such as dust, fluff and pet hairs out of the air, prolonging filter life span.
- **HEPA Fine Dust Filter** binds up to 99.97% of all airborne fine dust and ultrasmall particles up to a minimum size of 0.3 microns. Highly effective for the removal of mold, bacteria, viruses, pollen, dust mites, airborne microbes and allergens.
- **Activated Carbon Filter** effectively and permanently absorbs odors, tobacco smoke and volatile organic compounds (VOC) such as chemicals, formaldehyde, etc.
- **CleanCel™** filter cassette and pre-filter are treated with a patented, antimicrobial coating, which prevents the growth of odorforming bacteria, mold and fungi.

Five Models for Any Environment

MODEL	CAPACITY
AP15	150 sq ft
AP30	300 sq ft
AP45	450 sq ft
AP40	400 sq ft
AP100*	1000 sq ft

*includes wifi
