Wide: 10-350 sheets, max 1.5" [38.1mm]

Standard lengths: 8.5", 11", A4, A5, B5

The Powis Image Strip™

Represents a new level of binding customization. Now every document you bind can promote your brand, enhance your image, and ensure that each prospectus, manual, proposal or report that you produce is a cut above the competition.

With the Image Strip, you choose the graphics, colors, branding and logos to be printed on the strip. Add Powis Clear or Composition Covers, and the Image Strip transforms the most ordinary document and turns it into something special that everyone will notice. With the introduction of the Image Strip, branding and marketing suddenly become a lot easier. Every document you bind instantly promotes your brand. In larger companies, strips can vary from department to department, reinforcing your image, brand, or special event.

The Powis Image Blank™

Represents a new level of binding customization. Now every Document you bind can promote your brand, enhance your image, and ensure that each prospectus, manual, proposal or report that you produce is a cut above the competition.

People will notice. The Image Blank comes with Powis thermoplastic adhesive on the strips. You choose the graphics, colors, branding and logos, design using our template, and print your designs on an inkjet printer. Add Powis Clear or Composition Covers, and your Image Blanks... now Image Strips can take the most ordinary documents and turn them into something special that everyone will notice.

The Powis Perfectback™ Strip Collection

The Fastback 20 allows you to make a perfect bound book with a wide variety of cover stocks. Covers can be offset, ink-jet, or laser printed. Even covers with heat-sensitive inks or toner-based digital printing may be used.

Perfectback™ LF Strips

LF strips create a book bind that lays flat when opened — hence, the name LF. The spine hinges free from your book block. The book opens easily without creasing the spine. And you can do the final binding without heat so you can use printing methods and cover materials that are heat sensitive. These strips have two narrow bands of release paper, one on each side on the back of the strip.

Perfectback™ PS Strips

PS strips have a pressure sensitive adhesive for assembling books — this is why they are called PS strips. The entire spine of the cover is permanently bound to the book block. Final binding is done without heat so you can use cover materials or printing methods that are heat sensitive without worry. These strips have a narrow and a wide band of release paper on the back of the strip.

Perfectback™ TA Strips

TA strips bind your wraparound cover with a temperature activated adhesive — thus, the name TA strips. As with the binding of your book block, final binding of the cover is done on a Fastback® model 20 binder. Your cover is bound entirely to the spine of your book block. Heat sensitive cover materials or printing are not suitable for this method. TA strips can be identified by the single piece of release paper on the back of the strip.
