

Plastic Coil Binding Elements in a Wide Range of Pitches, Sizes and Colors

- Documents open easily and lie flat - perfect for reference materials, training manuals and any other types of books.
- Documents will have a sleek, professional look and will be securely bound yet easily revised.
- Plastic coil binding is quickly becoming the most popular type of short-run book binding method. Many companies are upgrading their plastic comb binding to plastic coil.
- Coil is available in a wide range of colors, may be rotated 360 degrees, and will lay flat.
- Coil is great for bound media that is mailed because of its resiliency. If the binding is bent in shipping, it will bounce back to its original shape.

Same Quality, Same Selection for BindRiteRecycled PVC Plastic Coil

If you're a regular purchaser of BindRite brand plastic coil, you'd never know the difference when you receive your next order. Manufactured from recycled PVC, our premium color coil binding elements look the same, perform the same and (best of all) cost the same. And you can still choose from 50 colors.

Twin Loop Wire Binding Elements

For a classic look with the ultimate in flexibility and function, you can't beat wire binding. Its layflat capability and range of cover and stock options means it can include almost anything and be used for any purpose.

Wire binding allows pages to turn 360 degrees, making it perfect for calendars, cookbooks, manuals and much more. Unlike other mechanical binding styles, wire bound books eliminate the 'step-up' from one page to the next that can ruin crossover images. That allows maps and complex technical drawings to be spread over both pages without disrupting their functionality.

The options for wire bound documents are nearly limitless. Designs can include stocks of various finishes and styles as well as foldouts and other touches that accentuate the professionalism of your presentations.

COLORS: Black, white, red, blue, silver, gold.
