

MetalBind Atlas 300

The Elegantly Simple Combo Binding | Hot Stamp Machine

The innovative Atlas 300 from MasterBind is the first binding system that combines document binding with hot foil stamping, delivering an economical, all-in-one solution for premium document presentations. In binding mode, the Atlas 300 is capable of producing securely bound documents up to 300 pages at production rates up to 120 per hour. Engineered for years of productivity, this machine features an all-metal housing and rugged construction. It is ideal for offices, in-plant print shops, copy stores, universities and other educational institutions, legal offices and photo studios. Compatible with virtually any cover stock, MetalBind machines offer a combination of unmatched flexibility and versatility that is changing the way the world thinks about custom binding and printing equipment.

The standard hot foil stamping module allows on-the-spot customization of hard and soft cover documents, spines, DVD/CD cases and photobooks. This innovative device is completely integrated with the MetalBind binding unit and provides classic embossing in a range of foil colors. Select from five standard fonts or produce custom logos and graphics.

Exclusive MetalBind Technology

Patented MetalBind technology assures safe, robust binding that far surpasses that of any punch and bind system, all without the need for punching holes. Operation is fast and easy with no special training required. Simply position the channel against the back of the machine, align the document papers in the slot and pull the binding handle. The exclusive CoverGuide feature makes page alignment accurate and trouble free. MetalBind binding equipment is compatible with virtually any cover stock for maximum creative impact.
